

# What's New in MindNode 2025.4

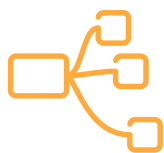

## Folders

Easily organize your documents into folders for better structure and quick access.

## Dynamic Themes

Themes now automatically adjust to match your device's light or dark mode.

## Flexible Layout

Enjoy more control with improved automatic layouts – manually reposition individual nodes as needed.

Hint: Hold the *option* key (⌥) while dragging a node to gain even more control.

## Improvements

Export and import your mind maps using a new MindNode file format that ensures full compatibility with MindNode Next.

You can now fold or unfold sibling nodes by Command-clicking the folding indicator, making map organization even easier.

Improved reliability and fixed various bugs related to node dragging and mirroring.

Fixed a crash on iPhone Pro Max when rotating to landscape while viewing an open document.

Fixed a pointer interaction glitch when dragging knobs on iOS.
